Raúl Escoriza Lopera

Software Engineer · Android & Web

Munich, Germany · raulescoriza3@gmail.com
linkedin.com/in/raulescoriza · raulescoriza.github.io

PROFILE

Software engineer working on Android and web apps, mostly on products built from scratch. Besides development, I often take care of product and UX design, and I have taken an app from first prototype to a public release on Google Play. Before software I worked as a physiotherapist, so I look at products from the user's side first.

SKILLS

Android: Kotlin, Jetpack Compose, Coroutines, MVVM, Android services, media service, vehicle sensor data via HAL

Product & UX: Figma, user flows, requirements gathering with clients

AI-assisted development: OpenCode, Claude; React, TypeScript, Vite

Tools & ways of working: Git, GitHub, Jira, Confluence, CI, code reviews, Scrum

EXPERIENCE

Software Engineer · Paradox Cat GmbH Jan 2025 – Present

Munich · HMI software company for automotive and aviation clients

In-seat exercise app for airline passengers (2026)

- Proposed the idea at an internal ideathon; the sales team later turned it into a client project.
- Responsible for product and UX design: scope, screens, visual style and user flow in Figma.
- Designed the exercise programme as a physiotherapist: exercise selection, duration, session structure, and what to adapt or leave out for a seated passenger.
- Implemented the React UI from my own designs with AI coding agents (OpenCode).

Carchestra, adaptive driving music app, public preview on Google Play (2025 – 2026)

- Worked on it from the first prototype to its public release. The music adapts in real time to the way you drive, based on vehicle sensor data.
- UI/UX, sensor data through the HAL, modularisation, and the Android media service with background services and Kotlin coroutines.
- Prepared the music: split licensed tracks into instrument stems in Reaper and built the intensity levels used by the algorithm.

Also: feature owner gathering requirements directly with the client, code reviews, onboarded and mentored colleagues, ran internal workshops. Scrum team with product owners, UX designers and QA.

Software Engineer (Internship contract) · Paradox Cat GmbH Sep 2024 – Dec 2024

- LetMePark: helped bring the client's mobile parking app into the car. Built the UI with Jetpack Compose and made it work across screen sizes.
- Implemented HMI interaction logic, UI components and animations in Kotlin based on HMI specifications.

Software Engineering Intern · Paradox Cat GmbH Apr 2024 – Jun 2024

- VR HMI demo: a space travel experience in Unreal Engine for Meta Quest. Researched and integrated hand and finger tracking plugins, and got an existing Android app running inside the headset.
- Documented design specifications, workflows and test results for the team.

Physiotherapist · Spain Jun 2021 – Jan 2024

Hospital Universitario Arnau de Vilanova (Lleida) · Instituto Médico Palmeño · Residencia Hospital San Sebastián

- Worked alongside my studies. Took patients from first assessment back to normal daily life with individual rehabilitation plans, in hospital, outpatient and geriatric care.

PROJECTS

physio-llm-eval · personal project Python · LLMs

- Evaluation pipeline that tests how language models reason through physiotherapy clinical cases, using a curated case set and scoring.

Dungeon Idle · personal project, in progress Kotlin · Jetpack Compose · React

- Idle RPG inspired by Shakes & Fidget. Built a web version in React; now building the Android version in Kotlin and Jetpack Compose with a modular architecture, CI and a PR-based workflow on GitHub.

Rehabilitation & fitness app · personal project Kotlin · Jetpack Compose

- Android app for booking appointments through a calendar. Focused on UI/UX: screen flow, navigation and visual design.

EDUCATION & LANGUAGES

Technical Degree, Multiplatform App Development · IES Antonio Gala 2022 – 2024

BSc Physiotherapy · Universidad de Lleida 2017 – 2021

Languages: Spanish (native) · English (fluent) · German (B1) · Catalan (B2)
